Returned herewith is an Office Action in the above referenced Patent Application that appears to have been misdirected to this firm because of a clerical mistake at PTO. It was accompanied by a cover sheet (enclosed herewith) for our Application 10/340,775 on which we had received an Office Action dated March 1, 2004.

Our records do not show Application 10/063,757 to be one of our cases. If I am mistaken let me know. Otherwise I suggest that the Office Action be redirected to its proper recipient.

Your courtesy and cooperation are appreciated.

Respectfully,

Charles E. Baxley

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM
THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration has been received and entered.
2. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. Inconvenience to the applicant is regretted.
3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

4. Claims 1-6, 8-9, and 12-15 and 17-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kurokawa (JP 07-290158 A). Kurokawa discloses a roll hemming device and method. Each of the claimed limitations is disclosed or implicit in the Kurokawa reference. For example, Kurokawa discloses:

- i. a roller that includes both a first cylindrical surface and, contiguous to said first surface, a series of connected surfaces that define a cavity relative to a chord from the first cylindrical surface edge (see Figs. 6);
- ii. wherein said cylindrical surface is "oriented" to contact an inner portion of the bendable flange of the outer panel and presses said flange inwardly in a first direction (i.e. straight down, as seen in Fig. 6);
- iii. wherein the series of connected surfaces, or shaped portion (23B, 44 in Figs. 5 or 6), engages an intermediate portion and applies a force to the intermediate portion (inherent) at an angle relative to the first direction (see Figs. 5 and 6).

Claim Rejections - 35 USC § 103

5. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurokawa.

Claim 12 adds, to the apparatus of claim 1, the step of using the cylindrical surface to pre-hem the flange to a 45° angle. Absent a showing that this process step is critical to the apparatus structure, it would have been an obvious matter of design choice to use the Kurokawa device in this manner, since the applicant has not disclosed that such use solves any stated problem or is for any particular purpose. Furthermore, it appears that the invention would perform equally well using the oblique surface for pre-hemming as shown in Fig. 3.

6. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kurokawa in view of Sawa '879. Claim 16 adds a press die. Sawa '879 teaches, in the hemming art, that a press die can be used in place of a roller (column 1, lines 53-57). Additionally, Sawa '879 teaches that press dies provide for shorter processing times (Id.). Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to use a press die instead of roller dies in order to reduce processing time, as explicitly stated by Sawa '879.

Response to Arguments

7. Applicant's arguments with respect to the previously applied Uchida reference have been considered but are moot in view of the new grounds of rejection.
